## Boosting Climate Literacy at State Government Department

People For Nature has been working with a State Government department that recognises the importance of employees embracing climate science with hope and systemic thinking. To support this, we designed a fun climate literacy workshop: Climate Conversations: Awareness and Impact, which we're delivering as part of the employee wellbeing program.

### Objectives

We created a tailor-made science-based workshop to boost climate literacy, linking awareness to wellbeing and professional growth. This department has put climate science at the centre of its staff training, empowering teams to have meaningful climate discussions. The positive, engaging approach in the workshop has sparked optimism and inspired several of the team to become climate workshop facilitators themselves.

### Feedback

This workshop is brilliant, helping us think deeply about how we interact with nature. We can see that the impacts of climate change are profound and reversing those effects takes time and effort. The facilitators were great - creating a safe space to discuss the issues, while giving us hope about the future.
